

Utility Bridge with Bicycle and Pedestrian Access

MARKET STREET BRIDGE REHABILITATION

Benefits:

- Provides location for bicycle and pedestrian use that is separated from vehicles on Market St.
- Provides access for emergency service vehicles and utility vehicles.
- Can be constructed without long term traffic control, i.e., lane reductions or detours.
- Provides location for bicycles and pedestrians to bypass work area during remainder of construction.
- Limits temporary outages for all utilities because there will only be one time required for connecting new lines to existing lines.
- Eliminates future traffic disruptions by utility companies working on their facilities on the Market St. Bridges.
- Reduces construction from 10 years to 5-6 years.
